When do you clean the sink?

If sink is only used for after toileting purposes:
Clean and disinfect once daily.

If sink is used for all other purposes (not toileting):
Clean and disinfect once daily.

If sink is used for after toileting and other purposes:
Clean and disinfect between purposes.

Sink Disinfecting Procedures

1. Spray sink with soap and water to remove debris.
2. Wipe dry with a dry paper towel; use a different paper towel for each sink.
3. Spray sink with disinfectant, covering entire surface.
4. If using bleach and water, let disinfectant sit for at least two minutes before wiping dry or until it has dried on its own. If using another EPA approved disinfectant let sit for length of time designated on bottle before drying.
