# TABLE SANITIZING PROCEDURES

1. Spray tables with soapy water to remove debris.  
Use a different paper towel to dry each table.
2. Spray table with sanitizing solution, covering the entire surface.
3. If using bleach and water, let sanitizer sit for at least two minutes before wiping dry or until it has dried on its own. If using an EPA approved sanitizer follow manufacturer's directions for use.
4. Use a different paper towel for each table.
5. Wash hands after sanitizing table.

**This procedure should be followed before and after mealtime and whenever the table is dirty.**
